NOTES

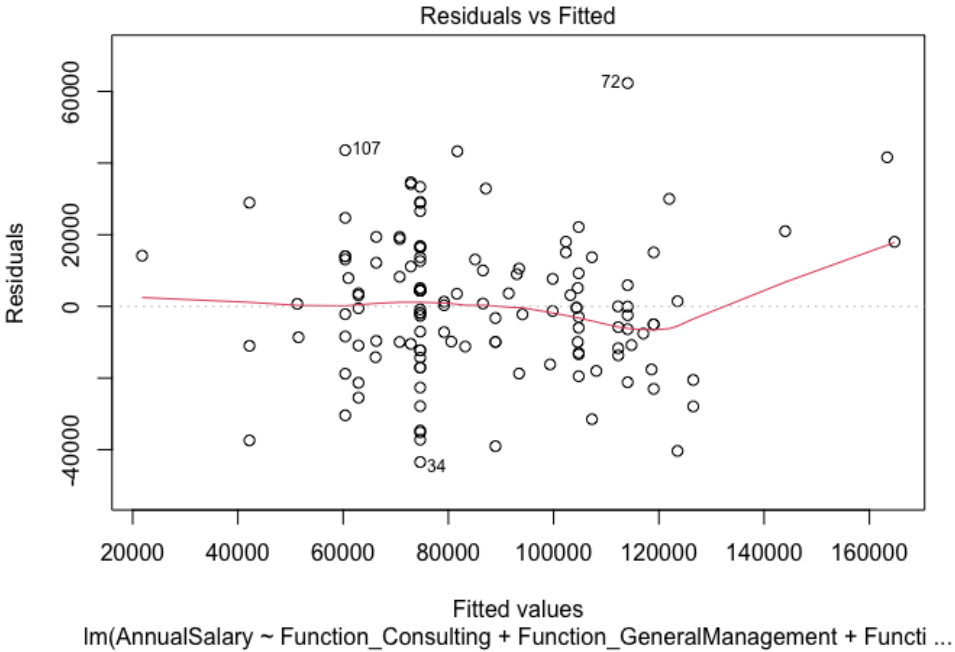

To analyze salary, user can focus on the following attributes:

- Month the offer was received
- Job Function
- Job Industry
- Job Location

Limitations regarding the model:

- The model was created with limited data from previous years. Therefore, the model's predictive ability on the current population may be worse than what was observed in the training data and will require further research.
- Although the model has a moderate R^2 of 0.61, it can be an indication that there are other attributes that are more predictive than those collected in the sample data.
